

The BLM Wilderness Study Area was declared in May 1992, and would protect an area of about 26.5 km². (6,563 acres) The area was prospected by the renowned dinosaur hunter Charles Hazelius Sternberg in the summer of 1921. Sternberg collected the type specimen of *Pentaceratops fenestratus*, a ceratopsid dinosaur from the late Cretaceous Period, within the WSA. Fossil collecting here without a permit is prohibited by law.
